

Complete Performance Management and Remediation
For the Entire Networked Application Stack

WildMetric is a complete solution that includes all pillars of core networked application monitoring in a single solution. From its boxed monitoring solutions to its free flow ability of creating custom solutions to cover your business processes, WildMetric provides transparency across the entire stack at a higher value over a longer service life.

A **Proven** Track Record Of Successful Performance Management and Remediation

Since 2004, WildMetrix has helped more than 400 IT professionals monitor and manage over 2500 critical IT business components serving over 1 million end users to increase efficiency, reduce down time, and provide complete transparency to all business stakeholders.

- ◆ **Bring your entire team together**, in real-time, with multi-user capabilities for involvement from all key stakeholders including application development, network operations, engineering and support.
- ◆ **Manage and reduce costs** by accelerating detection and correction of infrastructure performance and availability issues. Proactively monitor servers, network devices, applications and web services in real-time. Rapid deployment and control using “Out-of-the-Box” monitoring policies.
- ◆ **New business value through innovation**, Intuitive user interface expedites every step of identification, triage, and remediation of operational events both on the desktop and the big screen in the operations room.
- ◆ **Create end-to-end business solutions** with an extensible monitoring api and dashboard framework that allows visibility into diverse applications and infrastructure.

Designed by IT professionals for IT professionals, WildMetrix is built for everyday performance management and remediation to keep systems running, costs aligned, and the business successful.

Effective Management Using Technology

Crafted through innovation, experience, and community
